How whales sustain life on Earth and fight climate change

WHALE PUMP

PHYTOPLANKTON

1

WHALES FEED AT DEPTH

2

WHALES COME TO THE SURFACE TO BREATHE

As they travel up to take a breath, they circulate nutrients. This is known as the 'whale pump'

3

WHEN AT THE SURFACE, WHALES DO GIGANTIC POOS

This releases nutrients that phytoplankton, tiny plant-like organisms, need to survive

4

THROUGH PHOTOSYNTHESIS, PHYTOPLANKTON ABSORB NEARLY A THIRD OF HUMAN-GENERATED CARBON DIOXIDE FROM THE ATMOSPHERE

A similar amount to that absorbed by all land-based ecosystems, including forests and rainforests

5

PHYTOPLANKTON PROVIDE EVERY OTHER BREATH YOU TAKE

These floating 'rainforests' produce half of our planet's oxygen

6

THE 'WHALE PUMP' PROCESS CREATES A THRIVING OCEAN HABITAT

Nutrients from whale poo are key in supporting a healthy marine ecosystem and fish populations

TYPES OF ECOLOGICAL FOOTPRINT

CARBON FOOTPRINT

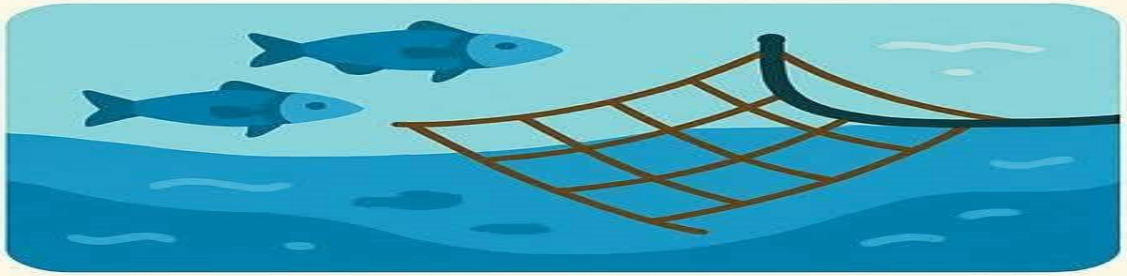
Area of forest land needed to absorb CO_2 emissions (global hectares)

GROPLAND FOOTPRINT

Land required to grow crops (global hectares)

FOREST FOOTPRINT

Area of forest used for timber (global hectares)



FISHING GROUNDS FOT

Water area needed to support fish and seafood (global hectares)

BUILT-UP LAND FOOTPRINT

Land covered by infrastructure (global hectares)
